

### Apraxia Battery For Adults (ABA-2), Second Edition, Barbara L. Dabul.

This revised test includes a systematic set of tasks to measure the presence and severity of apraxia in clients. An objective scoring system provides an initial step toward assessing recovery in relation to severity of apraxia. Includes six subtests: diadochokinetic rate, increasing word length, limb and oral apraxia, latency and utterance time for polysyllabic words, repeated trials test, and inventory of articulation characteristics. Takes about 20 minutes to administer.

Includes examiner's manual with picture plates, 50 response forms, 50 summary/profile sheets, storage box.

### Frenchay Dysarthria Assessment by Pamela M. Enderby

Reliable standardized test for the differential description and diagnosis of dysarthria. Divided into 11 sections: reflex, respiration, lips, jaw, palate, laryngeal, tongue, intelligibility, rate, sensation, and associated factors. Client is rated on a number of simple performance tasks. Results are recorded on a bar graph profile that indicates the strengths and weaknesses of the client. Simple to administer in approximately 20 minutes. Results can be easily communicated to other professionals via the three-part record form.

**40,000 Selected Words** by Valeda Blockcolsky, Joan M. Frazer and Douglas Frazer.

Outstanding reference provides a comprehensive word reference with practical lists. Dictionary groups consonant sounds by initial, medial and final position, and by consonant cluster / blends. Find medial and final sounds and blends not easily found in a standard dictionary. Arranged by number of syllables in each word. Control the variables of word length, sound preceding and following the target sound, and combinations of blends and clusters by making worksheets with these words.

638 pages, softcover.
